

# *Inland and Coastal's* ROWING & WATERSPORTS PONTOONS

## ARE YOUR PONTOONS FIT FOR THE FUTURE?

**Whether you're a club, charity or commercial enterprise, provision of simple, safe and secure access to the water is key.**

We've been making life easier for rowing clubs and watersports centres for years, replacing older pontoons with bespoke, anti-slip and more sustainable pontoons.

Our flexible designs for low freeboard, high residual buoyancy pontoons combined with innovative access gangways, provide safe and comfortable water access to all users.

**Are your access points non-slip and durable?**

**Can people get on the water without getting their feet wet?**

**Is it easy to launch and recover boats?**

**Can multiple people use your access points at the same time?**

**Are you ready for new user groups to share your facilities?**

# BELFAST ROWING CLUB UPGRADE

**“Anti-slip, mini-mesh decking means members feel more confident when moving boats,” says Jonny Baird, former club captain and project lead for the upgrade from slippery steps to a bespoke pontoon.**

“The investment’s transformed participation and enjoyment at the club. The broad access ramps and high residual buoyancy has made launching and recovering boats much easier. The new facilities have extended the season, enabling access in a wider range of weather and water conditions.”

#### **Funding Assistance**

We helped Jonny to secure funding from the Lottery Sports Fund for our sport specific surface, with excellent grip properties by providing him with valuable design, layout and budgeting information, enabling him to complete a successful application.

**We’re ready to support you too, every step of the way, working to your vision and budget.**

## INLAND AND COASTAL’S ROWING & WATERSPORTS PONTOONS

**We design our pontoons to meet club’s needs, with bespoke access solutions, specific decking materials and a keen understanding of all levels of participants needs.**

- **Great stability with low freeboard for easy launching and recovery**

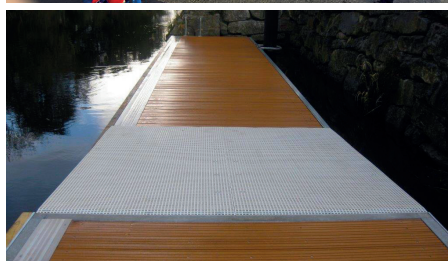

Our rowing and watersports pontoons maximise buoyancy while maintaining a low freeboard.

- **Anti-slip, and durable access/egress for safe water access**

The types of boats and the lifting abilities of the people using them are central to our design process. Watersports-specific, durable-decking options offer excellent anti-slip properties on wet surfaces.

- **Mooring and installation options for different environments**

We’ll complement any existing structure or natural edge, working with the location and environmental loads, whether tidal river, exposed coast or calm lake setting.

## TAKE THE NEXT STEP TOWARDS YOUR NEW FACILITIES

**We offer a wide range of water access solutions for watersports facilities, working within your budget.**
