## MARINA & WATERSPORTS PONTOONS

### MAJOR PONTOON UPGRADE AT PORT DINORWIC MARINA

Port Dinorwic Marina

**As part of a major upgrade project, we'll be working with The Marine Property Group to completely refresh the marina hardware of its 180-berth Port Dinorwic Marina.**

As much of the existing infrastructure as possible will be adapted, but where this isn't feasible, we'll replace walkways and finger pontoons completely with our Glass Reinforced Concrete (GRC) decked pontoons. The GRC decking remains slip resistant when wet and doesn't rot, considerably reducing maintenance costs while increasing the longevity of the marina system.

"We are investing in several areas at Port Dinorwic Marina, including the installation of club standard washrooms,

upgraded food and beverage outlets and common areas with the aim of ensuring our berth holders and visitors enjoy a first-class experience for many years to come," says Christopher Odling-Smee, Director of The Marine & Property Group.

"We've chosen to work with Inland and Coastal Marina Systems as not only do they produce quality durable pontoon systems, but the team is keen to work with, and utilise, much of what currently exists, making the most efficient use of time and resources."

Port Dinorwic Marina

**"It's great to be involved in such an interesting project. Our GRC pontoons will provide safe and stable berthing for a long time to come at this picturesque location.**

**As part of our sustainability effort, we always endeavour to work with existing infrastructure as much as possible, and we're pleased to be able to incorporate established marina components while modernising the facilities at Port Dinorwic Marina."**

**Oliver Shortall, MD, Inland & Coastal**

# WOULD YOU LIKE STRONG, STABLE AND SLIP RESISTANT PONTOONS?

GRC Stipple Effect

**Our GRC (glassfibre reinforced concrete) decking has fantastic anti-slip properties, and it doesn't rot.**

**Combining the strength of concrete with the slenderness of timber**

Using glass fibres for reinforcement, our concrete decking has comparable depth to timber and composite decks.

**Maintaining the traditional hardwood timber marina aesthetic**

A textured grain finish imitates timber, but it doesn't rot. Our Timber Effect GRC decking is the future for creating modern, sustainable marinas.

**Increased stability for greater confidence underfoot**

Concrete is much denser, increasing pontoon weight and providing a more stable platform giving users greater confidence underfoot.

**Offering the lowest lifetime costs**

As we manufacture our own GRC, our pontoons, with a design life of 30 years, offer the lowest lifetime cost of any marina decking on the market.

## CELIA THE SEABIN STILL GOING STRONG

**MDL's Ocean Village Marina installed its SeaBin in December last year in the North East corner of the marina, where prevailing winds cause the most litter to accumulate.**

Just over six months on 'Celia', as the SeaBin is affectionately known, is going strong. "She's been a great addition to the marina, keeping her side clean and detritus free, assisting my team with the overall cleanliness of the marina," says Scott Farquharson, Ocean Village Marina Manager.

"We've had a huge amount of plastic, mostly bottles and bags and, from time to time, a solitary flip flop. We usually empty Celia at least twice a day, it's very easy to do.

"Celia is making a real difference the levels of plastic and other litter in our marina and we'd love to have another SeaBin to be able to double our efforts."

## FIT FOR THE FUTURE

**It's the year for staycations. SUP and kayak sales are going through the roof, and marinas have a unique opportunity to take advantage of this by providing participants with safe access to the water.**

The Paddle Centre at Premier's Swanwick Marina has just opened, offering SUP and kayak hire, classes and experiences. An independent business, the Paddle Centre has dedicated onsite parking, changing facilities and provision for refreshments provided by the marina.

"Adding the Paddle Centre to the marina is providing a great new way for people to discover us and water sports together," says Graham Bristow, Premier General Manager.

We've years of experience designing and building durable, low freeboard water access systems ideal for all forms of paddle sports. Our stable, anti-slip pontoons are perfect for inexperienced users, especially important if operating as a 'pay and play' facility welcoming new comers to the water.
