

Brand new serviced narrow boat berthing in the heart of East London

Installing our hugely popular inland river pontoon system, complete with mooring piles and a full-service package that included bollards providing mains water and shore power to each berth at Limehouse cut in East London, serving narrow boat owners and other estuary boaters.

After undertaking a rigorous tender process, we were selected on the basis of offering a complete package that included our excellent inland river pontoon system, mooring piles and full services package that included individual bollards providing water and electric to each berth and a overall foul pump out facility connected to the landside drainage system.

As part of the installation, the client requested a dual security access system, biomatrix reed beds and fish refuges, as well as special provision for cycle storage.

The client was particularly impressed with our 2.4m wide wood effect GRC decking, which as well as its obvious aesthetic appeal, also provides an extended design life of over 30 years. The decking is low maintenance yet offers a highly durable surface appreciated by berth holders for its stability and grip.

The project required us to operate in a highly inaccessible location along Limehouse Cut. During the project we were also considerate of local wildlife issues, seeking specialist advice where needed to ensure that nesting areas were respected.

Client | **Poplar Harca**

Date | **2022**

Where | **Limehouse Cut, East London**

“Despite challenges with access to the estuary, we were able to implement each stage of the project with great success.”

Jon Challis, Sales Manager, ICMS
